

**The First Self Mining Smart Contract**

## **Minereum World App 2017/2018**

### **1. Introduction**

When we look around we believe that there is still a big disconnect between cryptocurrencies and the common people. Buying a cryptocurrency, exchanging it, or interacting with their communities is reserved for few, only for those that finally got the motivation to look into the subject.

Minereum will attempt to change that.

We are starting to conceptualize our new service that will have the primary objective of bringing as much people as possible to the Crypto World.

To do this we are proposing our Minereum World App.

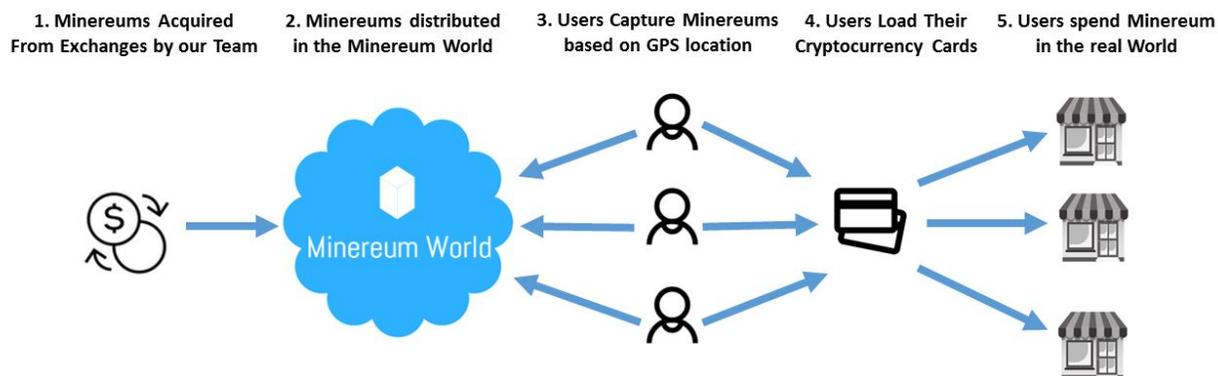

### **2. Definition**

The Minereum World App will be a mobile app available to everyone anywhere.

The App will work in the following way:

- Minereums will be distributed across the World based on GPS coordinates.
- The App will give to the users an Interface to interact with the Minereum World
- The users will be able to capture Minereums by approaching the GPS locations where they were distributed
- All tokens distributed in the App will be purchased directly by our Team from Minereum Exchanges
- The Users will then be able to spend their captured Minereums with their Cryptocurrency Cards in the real World

An illustration of the service can be seen below:

### 3. Technology

The App will be developed for:

- Android Phones
- iOS

### 4. Preventing Abuse

We will also be working on the conceptualization of preventing GPS spoofing. We will have mechanisms in place to prevent abuse.

### 5. Challenges

We foresee a set of challenges that we will work hard to overcome, not only the technical challenges but also the legislative challenges. We are currently starting to analyze the conceptualization of the service in all directions. The country of operations for the App will be based in Switzerland and from there distributed across the World.

We believe this service is a step forward to deliver Cryptocurrencies to the masses and we will do our best to achieve it.

We are aiming the delivery of the first version by the end of 2017, the app will be delivered Worldwide.
